

CASE STUDY

UPPER NAIRN RIVER WORKS

The works comprise restoration of the Upper Nairn River along four sub-reaches through modifications to existing embankments and partial realignment of the channel

Daily Project Management was undertaken by the Project Designers – CBEC Eco Engineering with further regular site inspections carried out by SEPA officials.

The project which saw McGowan Team join forces with Salix RW to undertake the works which included the innovative solution of using existing low lying marshland areas within the newly aligned river to assist in the alleviation of possible future flooding issues, all whilst creating a more desirable habitats for fish, flora, and fauna.

All works undertaken under SEPA CAR License stipulations with strict Silt pollution controls adopted throughout works, with further third party interaction with the local Fisheries Board and landowners.

PROJECT TYPE: River Re-alignment

LOCATION: Aberarder Estate, Highlands

CLIENT: Aberarder Estate & SEPA
